

Job Description for Software Developer

Job Description

At Arctic Wolf, you won't just watch the cybersecurity industry evolve – you'll help lead the change. Our global Pack is made up of people who thrive on solving hard problems, moving fast, and building technology that protects organizations around the world. We're proud to be recognized by Forbes, CNBC, Fortune, CRN, Gartner Peer Insights and IDC MarketScape – but what matters most is the work behind it: delivering real outcomes for customers through award winning innovation like our Aurora Platform.

If you're looking for meaningful work, smart teammates and the chance to make a real impact in a high-growth company that's redefining security operations, Arctic Wolf is the right place for you!

Our mission is simple: End Cyber Risk. We're looking for a **Software Developer** to be part of making this happen.

Position Overview and Objective

As a Developer for Arctic Wolf's Data Platform, you'll work on the team that focuses on building the systems that enable the storage and rapid searching of cybersecurity data. This telemetry data is collected from customers by leveraging endpoint, network, and cloud data sources both inside and outside our customers' networks. Our team designs, builds, and manages large-scale systems that allow both our customers and our employees to leverage these various data sets to better understand and improve security posture.

You'll work at the intersection of big data, distributed computing, and cloud technologies. Our existing stacks include both custom-built and open-source components written in Python, Go, or Java, deployed within Amazon Web Services. We leverage Kubernetes and other containerized platforms. Some major components we use include Kafka, Elasticsearch, Databricks, and Spark, along with various other components and additional custom application services developed in-house.

Responsibilities

- Contribute to the implementation and design of new data storage and search solutions, taking customer requirements into account.
- Maintain and enhance our existing Python, Go, and Java-based systems.
- Deploy, configure, and support open-source components and platform services.
- Take ownership of features and services from design and implementation through testing, deployment, and operational support.
- Identify gaps, risks, and improvement opportunities within assigned areas and work with senior engineers to address them.
- Collaborate with teammates and stakeholders to gather requirements, clarify ambiguities, and deliver practical solutions.
- Improve our capabilities to operate, monitor, and scale systems reliably as we grow.
- Contribute to software quality through automated testing, code reviews, observability, and operational excellence practices.
- Participate in knowledge sharing through documentation, technical discussions, design reviews, and incident investigations.

Experience & Requirements

- 2-5 years of experience working on **backend systems or distributed applications**.
- Excited about working in the big data space and learning large-scale data platform technologies.
- Relevant experience with **Python, Go, Java**, or other object-oriented programming languages.
- Experience working with **RESTful API interfaces** and service-oriented architectures.
- Experience writing **SQL queries** and working with relational databases; familiarity with joins, **aggregations, query tuning, and troubleshooting** is preferred.
- Exposure to **Elasticsearch DSL** or similar query languages and search technologies.
- Experience working within containerized environments and platforms such as **Kubernetes, Amazon EKS, Amazon ECS, or Docker**.
- Experience with **columnar and/or time-series databases** (e.g. Databricks, Elasticsearch, ClickHouse, etc).
- Exposure to **Amazon Web Services and cloud-native** technologies.

- Understanding of software quality practices including automated testing, code reviews, observability, validation, and troubleshooting.
- Ability to work cohesively within a team and habitually share knowledge through collaboration and documentation.

Nice-to-have experience:

- Understanding of query execution and optimization concepts, including query planning, partition pruning, indexing strategies, and performance troubleshooting.
- Experience with modern data lake and analytics technologies such as Delta Lake, Apache Iceberg, Databricks, Trino, Spark, or similar large-scale data processing and query platforms.
- Experience with message queue systems such as Amazon SQS, Kafka, or similar technologies.

On-Camera Policy

To support a fair, transparent, and engaging interview experience, candidates interviewing remotely are expected to be on camera during all video interviews. Being on camera fosters authentic connection, improves communication, and allows for full engagement from both candidates and interviewers. We understand that technical, bandwidth, or location-related challenges may occasionally prevent video use. If this applies, candidates are required to notify us in advance so we can explore appropriate accommodations.

About Arctic Wolf

At Arctic Wolf, we foster a collaborative and inclusive work environment that thrives on diversity of thought, background, and culture. This is reflected in our multiple awards, including Top Workplace USA (2021-2025), Best Places to Work – USA (2021-2025), Great Place to Work – Canada (2021-2024), Great Place to Work – UK (2024-2026), and Kununu Top Company – Germany (2024-2026). Our commitment to bold growth and shaping the future of security operations is matched by our dedication to customer satisfaction, with over 10,000 customers worldwide and more than 2,000 channel partners globally. As we continue to expand globally and enhance our technology, Arctic Wolf remains the most trusted name in the industry.

Our Values

Arctic Wolf recognizes that success comes from delighting our customers, so we work together to ensure that happens every day. We believe in diversity and inclusion and truly value the unique qualities and unique perspectives all employees bring to the organization. And we appreciate that—by protecting people's and organizations' sensitive data and seeking to end cyber risk— we get to work in an industry that is fundamental to the greater good.

We celebrate unique perspectives by creating a platform for all voices to be heard through our Pack Unity program. We encourage all employees to join or create a new alliance. See more about our Pack Unity [here](#).

We also believe and practice corporate responsibility, and have recently joined the Pledge 1% Movement, ensuring that we continue to give back to our community. We know that through our mission to End Cyber Risk we will continue to engage and give back to our communities.

All **India** wolves receive compelling compensation and benefits packages, including:

- Equity for all employees
- Flexible annual leave, paid holidays and volunteer days
- Comprehensive private benefits plan including medical insurance for you and your family, life insurance (3x compensation), and personal accident insurance.
- Fertility support and paid parental leave
- Employee Assistance Program

Arctic Wolf is an Equal Opportunity Employer and considers applicants for employment without regard to race, color, religion, sex, orientation, national origin, age, disability, genetics, or any other basis forbidden under federal, provincial, or local law. Arctic Wolf is committed to fostering a welcoming, accessible, respectful, and inclusive environment ensuring equal access and participation for people with disabilities. As such, we strive to make our entire experience as accessible as possible and provide accommodations as required for candidates and employees with disabilities and/or other specific needs where possible. Please let us know if you require any accommodation by emailing recruiting@arcticwolf.com. View our [Hiring Page](#) to learn more about our application process.

Security Requirements

- Conducts duties and responsibilities in accordance with AWN's Information Security policies, standards, processes, and controls to protect the confidentiality, integrity and availability of AWN business information (in accordance with our employee handbook and corporate policies).

- Background checks are required for this position.
- This position may require access to information protected under U.S. export control laws and regulations, including the Export Administration Regulations (“EAR”). Please note that, if applicable, an offer for employment will be conditioned on authorization to receive software or technology controlled under these U.S. export control laws and regulations.
